WHAT IS JAVA?

Java language is a general-purpose programming language. Which built on the idea of e class-based, object-oriented by java developer. And it depends on the implementation view. So, The aim is to allow apps developers to write once. But, run any times and anywhere, So, it means that the compiled Java code can run on all platforms. That helps Java without the need for recompilations. But, Java apps typically java online compiled to byte code. Which will run on any Java virtual machine. And it does not depend on the underlying computer structure. Thus, The syntax of Java is like C and C++.programming words. Hence, java works with java JDK, java virtual machine JVM, and java runtime environment JRE. Java was one of the first big programming words in use like with GitHub, notably for client-server web uses, with a listed 9 million developers.
